

### Rebound PRP for CCL Rupture

#### Treatment

- Rebound PRP is used to address ruptures of both the LR and RR tibio-tarsal joints in a 12yr-old neutered male

#### 4 Weeks Post

- Owner assess lameness to have improved two points from a 1, prior to Rebound PRP, to a 3 out of 10

#### 8 Weeks Post

- Owner reports lameness to have improved to an 8 out of 10, 10 being no lameness at all

#### 12 Weeks Post

- Owner reports lameness to have improved to a 9 out of 10

#### 16 & 20 Weeks Post

- Owner reports lameness to have improved to a 10

“Bear now walks a mile a day with [his owner] and wants to, which is something he hasn’t done in years.”

– Brian L. Davis, MS, DVM, Green Valley Veterinary Service
